

Java

```
class Solution {  
    public long countIntersectingIntervals(int[][] intervals) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[][]} intervals  
 * @return {number}  
 */  
var countIntersectingIntervals = function(intervals) {  
  
};
```

TypeScript

```
function countIntersectingIntervals(intervals: number[][]): number {  
  
};
```

C++

```
class Solution {  
public:
```

```
long long countIntersectingIntervals(vector<vector<int>>& intervals) {  
    }  
};  
-----
```

C#

```
public class Solution {  
    public long CountIntersectingIntervals(int[][] intervals) {  
    }  
}
```

Kotlin

```
class Solution {  
    fun countIntersectingIntervals(intervals: Array<IntArray>): Long {  
    }  
}
```

Go

```
func countIntersectingIntervals(intervals [][]int) int64 {  
}
```
